this book contains introductory comments concerning the definitions the symmetry

properties and the basic formulae for matrix elements of tensor operators the main body of text consists of tables of reduced matrix elements of double tensor operators within pn dn and fn configurations i e all the principal pure configurations of the atomic and nuclear structure these tables are complete which means that the author has run through all the states of the following configurations p_2 p_3 d_2 d_3 d_4 d_5 f_2 f_3 f_4 f_5 f_6 f_7 for multiparticle systems with central symmetry double tensor operators w_1k_2 have been chosen in these calculations for a number of reasons first of all they are the most general type of spherical tensor operators and since they are normalized they are the most convenient to use secondly they have been very frequently used in many areas of physics most notably in nuclear atomic molecular and solid state physics there are also tabulated conversion factors to enable the use of these tables for other types of definitions of tensor operators

this fourth edition of selecta of my work on the stability of matter contains recent work on two topics that continue to fascinate me quantum electrodynamics qed and the bose gas three papers have been added to part vii on qed as i mentioned in the preface to the third edition there must be a way to formulate a non perturbative qed presumably with an ultraviolet cutoff that correctly describes low energy physics i e ordinary matter and its interaction with the electromagnetic field the new paper vii 5 which quantizes the results in v 9 shows that the elementary no pair version of relativistic qed using the dirac operator is unstable when many body effects are taken into account stability can be restored however if the dirac operator with the field instead of the bare dirac operator is used to define an electron thus the notion of a bare electron without its self field is physically questionable
